Skills: Python, Angular, React, Redux, JavaScript, Node, Express, HTML, CSS, SQL, postgres, RDBMS, Sequelize, Flask, SQLAlchemy ORM, Alembic, Figma, AWS, Heroku, Webpack, Docker, Docker Compose, GitHub, REST API's, TDD

Experience

Full Stack Engineer | CACI, Int'l

May 2022 – Current

- Dockerize development environments for easy cross-platform development
- Automate deployment of docker containers using docker-compose
- React/Angular/Typescript: development of new components, PIP windows and redux slices of state
- Create new tools using Javascript for cross-platform development
- Create raspberry pi / linux images using BitBake recipes to simulate deployment environments
- Create workflows in github for automated deployment to main branch
- Manage development workflows with Jira
- Debugging and testing using gulp
- Write new Jasmine test cases for TDD

Full Stack Engineer | PhiredUp/Techniphi

June 2021 – Mar 2022

- Updated my tech stack with the latest web technologies using best practices and design patterns.
- Created new components using React Native for iOS and Android deployments
- Deployed mobile app updates to appstore and google play store
- Debugged React, React Native, php, and Python code for support issues
- Participated in support rotations
- Documented support issues
- Investigated AWS issues
- Updated postgresSQL database using backend endpoints
- Updated MySQL database directly using SQL in SequelPro
- Debugged php using MAMP Pro with Visual Studio Code
- Wrote slackbots in python for first level support use

Student | App Academy

July 2020 – Dec 2020

- Updated my tech stack with the latest web technologies using best practices and design patterns.

Software Consultant | Canyon Hills Group

August 2017 - July 2020

- Architectural and design consulting providing web design and delivery utilizing Wordpress and Magento CMS
- Software development consulting with Object-oriented design in a DevOps / Agile environment with Angular UI.
- Performed QA in a React / Native environment on mobile platforms with both Android and iOS development. Used Jest and Gradle in our Test-Driven Development within a DevOps CI/CD environment on Azure.
-

IT Engineer | Toolwire, Inc.

April 2011 - July 2017

- Designed, implemented, and standardized Citrix and VMWare virtual environment for our SaaS systems delivery using perl scripting to prepare components, such as: LAN's and persistent storage connections, reducing delivery time from 5 days to 1 day.
- Managed over 200 Citrix servers, updating and normalizing servers to maximize server utilization and reduce server requirements by 40%, reducing the need for added power to our server cage.
- Maintained data warehousing system utilizing visual basic for applications, transforming excel data into SQL, reducing new course roll-out time by 50%.
- Architected and delivered complex infrastructure workflow training for both engineers and course designers, reducing ticket "turnaround to resolution" time by 75%.

- Enhanced code base written in Java with Spring Boot / Hibernate, Junit and JavaBeans, JSP, and SQL on an Agile development team using JIRA and Confluence in 2-week sprints following our sprint planning sessions.

Projects

Scheduler (**Python, HTML, CSS, Flask, FlaskSQLAlchemy, Alembic, postgres, Webpack**)

[github](#)

Placement agency scheduling assistant for outsourcing and managing contractor placements

- Provides authentication and authorization via API's on the backend and authorized private routes on the frontend to maintain user security.
- Utilizes postgresSQL database for tracking contractor, placement agency, and hiring manager requests and schedules
- Provides data consistency across components using Redux store and React hooks managing UI / UX state.

CF Riders (**JavaScript, React / Redux, JSX, Node.js, Express.js, postgresSQL, Sequelize ORM**)

[github](#)

A Social Networking Site Providing Bicycle Equipment with customer reviews

- Provides user security via bcrypt hashing on the NodeJS, Express backend.
- Tracking and storing data using postgresSQL/Sequelize for product ratings as well as comments
- Reusing components was the forefront of this design maintaining site consistency and reducing development time.

Cadence (**Python, React.js, Redux, JSX, postgresSQL, Sequelize, AWS, Heroku, RESTful APIs**)

[github](#)

A Social Networking Site Providing Customized Route Maps for running, hiking or bicycling

- Providing elevation, distance and time information in our UI/UX via Google maps API and AWS S3 integration for storing user uploaded workout photos associated with a particular route.
- Creating models, migrations, and database tables using Python Flask library and sqlalchemy and Alembic

Coredump (**JavaScript, ReactJS, Redux, JSX, NodeJS & ExpressJS, Pug templates, postgresSQL**). [github](#)

A Social Networking Site for Providing Software Q & A

- Providing associations and product ratings as well as user comments with postgresSQL database design utilizing Sequelize ORM for managing db modeling and queries.

Education

App Academy | San Francisco, CA July 2020 Immersive 1000-hr full stack engineering course

San Francisco State University | San Francisco, CA | Bachelor of Science in Computer Science (BSCS)

Federal Security Clearance

Secret: Effective: 3/2023
